

## Anti-Virus from Sophos – Your security is our goal.

Security experts assume that industrial production plants will be targeted by an increasing number of viruses in the future. The best example of this is the Stuxnet virus. It has been specifically created for manipulating PC/PLC-based control systems and may massively damage industrial processing installations.

Initial protection against such threats is offered by an up-to-date and qualified anti-virus program. It must be up-to-date because anti-virus program producers respond within the shortest time to new viruses and offer automatic updates via the Internet. On the other hand, it must be qualified in order to provide maximum protection against viruses without affecting regular operation of the process control system. Bühler AG has therefore chosen Endpoint Security by the well-known company Sophos.

Sophos offers exactly what you need: good yet easy-to-manage protection against threats by known viruses.

Bühler AG offers you the up-to-date Sophos Endpoint Security program for your plant. If you wish, Bühler AG will be pleased to support you in the installation work and selecting the optimal configuration. This may be done either by remote access through the Internet or during an on-site visit to your plant.

Should you too decide to entrust the protection of your process control system to the anti-virus program of Sophos, please complete the order form and return it to us after signing it. Should you have any questions, please feel free to contact the Customer Service function specified below.

This offer is only valid for procurement from Bühler Uzwil. General export restrictions are applicable. The General Business Terms and Conditions of Bühler are applicable.

### Benefits

- Optimal protection against viruses such as Stuxnet
- 5-year license included
- Optimal configuration for your system
- Low capital investment
- Most up-to-date version of the virus scanner

### Requirements

- Internet link for automatic updates
- Existing remote access for installation
