

Juno

Process automation for the rice industry at attractive cost-benefits

Juno is Bühler's automation solution for smaller lines and plants. It focuses on making process automation straightforward, affordable and intuitive. Juno is all what is needed to process foodstuffs, from raw material to final product.

Investment safety and low cost of ownership

Juno is convenient and affordable at the same time. Along with changing market requirements, Juno is scalable and adaptable. Its intuitive operating ensures that training costs are limited to a minimum.

High flexibility thanks to system adaptability

Juno offers high flexibility should you wish to adjust your processes or equipment. Advanced customers may even choose to perform system adjustments, such as process interlockings, by themselves. Its scalability further adds to your flexibility.

Peace-of-mind thanks to reliable remote service

With Juno, you are never far away from Bühler expert support should you need it. Our solution offers exceptional remote access, even via 3G/4G connectivity. Fast reaction and problemsolving leads to increased uptime.

Minimal training and operating errors thanks to exceptional usability

The operating of the plant is highly intuitive and follows industry best-practice. A built-in simulation mode offers a safe environment for training and can even be used before start-up of the plant. Training efforts are minimized and full production achieved in no time after start-up.

Benefits.

- Investment safety and low cost of ownership
- High flexibility thanks to system adaptability
- Peace-of-mind thanks to reliable remote service
- Minimal training and operating errors thanks to exceptional usability
