

Windows 10 for your processes **Grain Milling Automation**

The latest technology for your plant automation.

Bühler is now offering upgrades to the Windows 10 version of the popular WinCos plant control system, effective immediately.

Have you already switched to Windows 10 on your personal PC and benefited from the optimizations in the new operating system? Windows 10 was installed more than 10 million times on the day it was launched, and more than 200 million users had switched to the new operating system by the end of 2015.

Bühler now offers upgrades for the popular plant control system WinCos to the Windows 10 version. Along with the upgrade, the existing hardware will also be replaced. Many older computers can be equipped with the latest, modern hardware through this upgrade.

Windows 10 offers many new functions that enable easier operation. A faster system start, greater stability, an improved Start menu and many other features pull out the best from your plant control system. In addition, you can save significantly on long-term operating costs thanks to the more efficient hardware with integrated and advanced energy-saving features.

Advantages

- Efficient utilization of your plant
- Maximum system availability
- State-of-the-art safety mechanisms
